

# Magic Goo!

This is the easiest, most fun experiment you can enjoy with your children. It is an all time favorite for any age!

1/2 cup of water  
1 cup cornstarch  
add favorite color with liquid water colors or food coloring  
mix with hands and let the magic begin!

This is not only a fascinating sensory experiment, it's a wonderful teaching opportunity... learning the difference between a solid and a liquid. You can make new colors by mixing the colors too.

What 2 colors make green? purple? orange?

Have fun! We miss you so so much!  
Love, Beryl & Betsy
